

Reading Response 1

Write your name, student number, and the date at the top of the page. In around half a page, respond to the questions below.

- Question 1: Around the time when the term “Big Data” was first coined, what were the “three Vs” originally used to define and describe it?
- Question 2: In What’s the big idea? “Big Data” and its origins, Diebold concludes that Big Data should be considered its own scientific discipline, and not just the intersection of traditional disciplines such as Statistics and Computing Science. What is his argument for this?
